

POWER ON

All utilities. One provider.

Gigabit Full Fibre Networks

For New Build Developments

The Power of Connectivity

Power On's fibre networks deliver impressive gigabit speeds, with service packages up to 1Gbps, ensuring we always remain at the forefront of the industry.

We provide high-rise developments with an affordable, multi-utility solution that includes ultrafast broadband, TV, online streaming, and telephone services.

Designed for High-Rise Living

- Fibre-ready homes for high-rise developments via a dedicated single Fibre network.
- Primary line cable services included for fire and lift alarms.
- No comms room required for developments up to 840 plots, with service from an off-site street cabinet, leading to cost savings, and minimum onsite space required for our equipment.
- BTR landlord broadband service with speeds from 25Mbps to 1Gbps.
- Connectivity for CCTV, public realm Wi-Fi, smart meter systems, BMS, door access systems (installed by others) to plug into our network.

Open Access

Our open-access fibre platform allows residents to choose from 19 service providers. With partnerships including Sky, Virgin, and 17 other ISPs, residents can select a package that suits their needs and budget—available from the day they move in.

Premier Partnerships

Exclusive partnerships with major brands like Virgin and Sky ensure your development offers top-tier broadband services and TV options, providing the best entertainment and fastest connectivity.

Comprehensive Solutions

We offer Fibre Integrated Reception Systems (FIRS), delivering digital, terrestrial, and satellite TV and digital radio to homes from a central dish and aerial array. FIRS is ideal for high-density developments or where planning restricts satellite dishes and aerials.

Future-Proof Technology

Our gigabit full fibre networks are designed to meet today's demands and the challenges of the future. Power On invests in future-proof technology that supports connectivity needs for years to come. We install, own, operate, repair, maintain, and upgrade the network, limiting liability for building owners.

Significant Cost Efficiency and Savings

Our coordinated multi-utility approach offers significant savings through competitive rebates and lower construction and installation costs. Shared cable containment for electricity and fibre cabling delivers substantial savings, with market-leading discounts applied upfront.

Seamless Service

We provide exceptional service with a single point of contact for all your utility needs. Developers benefit from streamlined interactions, while residents enjoy comprehensive customer support from our sister company and network operator, OFNL, including regular site visits and on-site sales team training.

Cutting-edge Connectivity for Kings Cross

Our Fibre solution delivers connectivity to London's Kings Cross development, home to global tech giants such as Google and Facebook.

POWER ON

All utilities. One provider.

Choose Power On

Power On is the reliable, experienced, flexible and proven choice for Fibre. We deliver cutting-edge gigabit-capable, ultrafast broadband and comprehensive entertainment services for residents with significant savings, premium rebates, a single provider and an efficient, easy process for developers.
